Total general comments on Sawtooth - 2 organizations, 837 individuals.	Blaine: Note: comment that follows does not apply specifically to boulder white cloud portion. In Sawtooth MA#2 - the Upper Salmon River valley - need to be assured that MP allows for harvesting and thinning of beetle-killed, dying or infected trees referred to as red fuels. Current MP is ambiguous as to whether access is allowed for the sole purpose of preventative action. Recommend temporary access should be allowed to area north of Galena Summit, south of HWY 21, west of HWY 75 to Sawtooth Wilderness Boundary - for the purpose of fuel mitigation to decrease probability of catastrophic fire, any access provided would be temporary and rehabilitated to a natural state once the program is complete access would not be provided until a red fuel mitigation plan and funding is in place. If in fact, this is currently allowable request that ruling be made in writing by the US FS.	Custer: MA# 2 - Note: comment that follows does not apply specifically to boulder white cloud portion. Need to be assured that prescription allows for harvesting and thinning of beetle-killed-killed or dying trees, current MP is too vague - temporary access should be allowed (area north of Galena Summit, south of HWY 21, west of HWY 75 to Sawtooth Wilderness Boundary. MA#3 Marsh Creek - assure access to federal lands, Archer Creek road separates federal land and private property. General - All management plans should: improve and emphasize control of noxious weeds and invasive species; allow for harvest and thinning of beetle-killed, dying or infected trees (support thinning over controlled burns); management and enforcement of travel plan needs to be emphasized.
